

Software to control pallets

2ic Pallets is a specialised software tool for efficiently managing pallets and other rented containers. It reconciles pallet company invoices and provides tight control to eliminate losses and minimise costs.

The Problem

- ❑ Pallets are inherently difficult to manage. Transfers & exchanges, rejections & corrections – it is unlike ordinary inventory control.
- ❑ Pallet companies require transactions to be submitted electronically.
- ❑ Invoices from pallet companies are complex and time consuming to reconcile.
- ❑ Equipment coming on to the account must be transferred off. Losing pallets is a constant risk and potentially very expensive.

The Solution

- ❑ 2ic Pallets simplifies pallet management.
- ❑ Automated reconciliation reduces errors, identifies problems and saves time. Both quantities and charges are checked on each invoice.
- ❑ 2ic Pallets is focussed on preventing losses and reducing risk.
- ❑ A suite of reports aid in pallet management and ensure equipment balances and liabilities are known at all times.
- ❑ Suitable for all pallet users in the supply chain.

How it works

- ❑ Movements are either keyed or imported from your warehouse or transport management system.
- ❑ Selected movements are exported to pallet companies.
- ❑ Pallet company invoices are imported and automatically reconciled. Exceptions are identified and handled efficiently.
- ❑ Physical counts are recorded for accurate reporting of gains or losses, relative to account balances.

2ic Pallets is compatible with:

CHEP	44 countries
Loscam	Australia & Asia
CPC	Canada
IPP Logipal	Europe
LPR	Europe
CEVA Logistics	Australia

"If you don't manage pallets properly, things quickly get out of control and the costs can be quite horrendous. Without 2ic Pallets it would be totally impractical to do what we are doing and get the results we are achieving."

Ms Belinda Field
Materials Handling Manager
Star Track Express, Australia

"Reconciliation has been streamlined via 2ic's automatic process. Indeed in terms of reduced paperwork alone we are now saving 40 labour hours per month."

Mr Rob Barr
Warehouse Specialist
Unisource, Canada

Web-based add-on system

- ❑ Streamlined online system that is ideal for lower-volume locations, e.g. retail stores.
- ❑ Feeds pallet movement records into 2ic Pallets for centralised reconciling.
- ❑ Easy to use and purely web-based – no software is installed on the user's computer.
